DETAILED ACTION

Election/Restrictions

Applicant's election of Species I (claims 1-3) in Paper No. 5 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Drawings

Figure 5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Pramanick et al. (6,165,894).

Pramanick et al. disclose forming a copper-containing film (13A) on a semiconductor substrate (10); removing, with a cleaning agent, a copper oxide on a surface of said copper-containing film; applying a nitriding treatment to the surface of said copper containing film from which the copper oxide has been removed; and forming a copper diffusion prevention film (40) comprising a silicon on said copper containing film which has been subjected to the nitriding treatment (Col. 5, line 8-Col. 6, line 50); wherein following the step of removing copper oxide on the surface of said copper containing film, the step of applying the nitriding treatment to the surface of said copper containing film is performed, without allowing the semiconductor substrate on which said copper containing film from which copper oxide has been removed is formed to be exposed to an oxygen containing atmosphere; wherein the nitriding treatment applied to the surface of said copper containing film is effected by a plasma treatment with a source gas comprising a nitrogen element being used.
